

# Mounted Projection Screens

## Eyeline® Pro electric screens

Professional projection screen for operation by IR remote, 12v trigger or central control system

Eyeline® Pro is built using a high quality matte white screen material providing a crisp flat viewing surface. The view area is framed by 50mm black borders which enhance the image for truly stunning results. For optimal viewing height, this screen also features an extended black drop. The screen can be operated in a number of ways to suit your individual requirements and comes as standard with an infra-red (IR) remote control and IR extension cable for use if the case sensor is obstructed. Also included is an integral 12v trigger with a 10m cable for connection to a projector for operation when the projector is powered on/off and a RJ11 (6P6C) connection that enables the screen to be connected to a RS232 central control system. Connectivity points are via the left hand end cap. A manual override button is also built in underneath the screen for fail safe operation if remote is lost or has a dead battery. This screen is available in a wide range of popular sizes and three formats 4:3, 16:9 and 16:10. The screen case is easily mounted to a wall or ceiling using channel fix brackets and is suitable for both home and professional use. No electrical installation is required, as the screen is supplied with a 2.7m cable and plug for immediate use.
